

Our portfolio

Jelitto Star
ILLUMINATIONEN

Made in Germany

A person is working on Christmas lights in a workshop. The person is wearing a dark jacket and is focused on their work. The workshop is filled with various tools and materials, including a large spool of wire and a shelf with boxes. The lighting is dim, with a warm glow from the lights being worked on.

About us ...

Jelitto Star was founded over 60 years ago in Bremen, Germany, by master electrician Wilfried Jelitto. The company is now in its third generation as a successful supplier of Christmas illuminations to destinations all over the world.

During this time we have successfully undertaken consultations and designs all around the world in cooperation with our general agencies. During the peak season more than 30 qualified employees are available.

The lead time for our standard range comprising more than 150 models of illuminations takes a maximum of 14 days.

All of our motifs are made in Germany and are therefore available until just before Christmas.

References:

- Regent Street in London
- Kärntner Street in Vienna

Jelitto Star achieved a special milestone in 1999 when it supplied the illuminations for the ballroom in Stanley Kubrick's last movie „Eyes Wide Shut“.

Our customers:

- Marketing associations
- Towns and local authorities
- Shopping centres
- City marketing
- Retail trade
- Private individuals

What you should know...

Our products:

All of our displays are made from aluminum tubing or sections - this guarantees durability, low weight and quick installation.

All of our electrical components are VDE-approved. All light sockets, seals, plugs and cables are splash proof and tested in accordance with EU standards.

Comprehensive on-site consultation including visit to the building, assessment of quantities required taking into account the installation options specific to the building.

Comprehensive quotation including photomontage, positioning plans with exact data on illumination weight, power consumption and surface area exposed to the wind.

Design of special displays such as business or shopping centre logos.

Development of special brackets to your specification for almost any installation situation.

★ about us:

Special brackets manufactured to customer requirements make installation easy and save lots of time and money in subsequent years.

All classical illuminations with E27 sockets come supplied with our black, UV-resistant silicone seals. Our E27 lamps are manufactured with a special bonding.

We thoroughly test and check the reliability and durability of bought-in mini light strings or light ropes with LED technology.

The garlands manufactured in-house are UV-resistant and remaining non-fading even in strong sunlight.

The plastic film used is flame-retardant in accordance with DIN 4102 and has a B2 flammability rating.

Our garlands are mounted on galvanised wire and remain on the display for many years.

Across-street illuminations

Our across-street illuminations help you to avoid unattractive gaps when illuminating „your“ street and create an impressive overall experience.

Advantages: The „black hole“ between the sides of the street area is festively illuminated, all you need is one illumination every 15 to 25 meters. Mounting all displays at the same height results in a very nice depth effect. Activating all illumination at the same time additionally creates a strong ‚wow‘ effect.

Delivery includes galvanised steel cable (6 mm diameter) with cable tensioner, cable dampers, pre-mounted chains with carabiners on displays. Individual displays fitted with earthed safety plug, light sockets with UV-resistant, black silicone seal, LED-lamps (0,8 W) with a special bonding - available in matte or clear.

Information: Clearance height (4,5 m lower edge motif) must be observed. Initial installation is labor intensive. Subsequent installations incur costs for elevating platforms. Permission of building owner is required. Depending on the type of display the connection of the displays is established VDE-approved connectors and coupling or VDE-approved screw connection. Jelitto Star service: Manufacturing of special illuminations such as city coat of arms and logos. Most displays are also available with LED light rope or LED E27 lamps.

Pole lighting

Even street lamps or other posts become a festively eye-catcher with a very nice depth effect by installing this kind of illumination.

LED-lamps (0,8 W) with a special bonding - available in matte or clear, light sockets with UV-resistant, black silicone seal. All LED-MB displays are equipped with LED light rope (13mm diameter, 36 lights /m).

Advantages: Mounting all displays at the same height and distance results in a very nice depth effect. By using electrical sockets during the initial installation, you won't need expensive and skilled staff for subsequent installations - this reduces follow-up costs. Delivery includes band clamps with galvanised clamping band to fit all posts from 60 to 100 mm diameter, 1m supply lead and loose, VDE-approved, earthed safety plug.

Jelitto Star service: Marman clamps with sponge rubber for painted streetlights. Special fittings for any post according to customer specification. Most displays are also available with LED light rope or LED E27 lamps.

Information: Installation height of approximately 3 m (in purely pedestrian precincts) must be observed. 4.5 m clearance height for installation above car traffic) must be observed.

Building illuminations

HN-installation 90°

Create your outdoor lighting according to your individual ideas and specification, including custom-made displays such as business logos or city coat of arms.

Delivery includes one 90° wall bracket, wedge bolts and wing nuts for easy installation, 1m cable lead with fitted outdoor plug and LED-lamps (0,8 W) available in matte or clear.

Advantages: Since every business operates its own illuminations the marketing association incurs no extra costs. Only those who paying for the illumination actually receive a display (no free riders). If outdoor sockets are installed by a qualified electrician during the initial installation subsequent installations can be undertaken by your own staff to reduce costs.

Jelitto Star service:

Manufacturing of special illuminations such as city coat of arms and logos. Special brackets for all types of walls. All displays are also available with LED light rope or LED mini light strings.

Information: Black holes are often created by non-participating businesses. Installation height may vary massively. Installation height should not be below 3 m to prevent vandalism.

3D-Illuminations

3D-Illuminations, letterings, custom-built displays.
Individual illuminations built according to your needs and wishes that impresses with three-dimensional appearance will cast its magic spell over pedestrians, visitors and your customers.

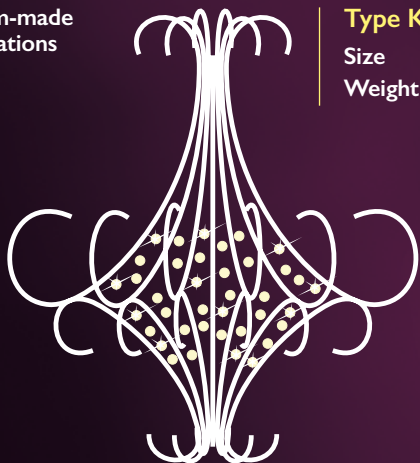

Custom-made illuminations:
A rough sketch is sufficient for us to create an attractive illumination.

Data sheets containing weight, power consumption and surface area exposed to the wind have been standard at Jelitto Star for years. We use light sockets with an E27 thread. We only use lamps based on LED technology (mini light strings / E27 lamps / light ropes).
